

Effective. Economical. Environmentally friendly

Developed in-house by mr natural® labs, BioShield is the longest lasting mold prevention product available that is both ecologically sensitive and human friendly.

A unique hi-tech polymer binds the non-toxic solution to the applied surface and won't wash away. The clear coating stays active through hundreds of wet and dry mold growth cycles, preventing growth for up to six months on flooring and bathrooms, up to two years on internal and external applications such as walls and ceilings, and up to 25 years in enclosed areas.

BioShield is low odor, has no visible residue, and leaves areas ready for occupancy once a sprayed surface has settled and fully air dried. BioShield may be used on wood, plastic, glass, drywall, carpet, grout, fabrics and other surfaces. At up to 1,000 square feet of coverage per gallon, BioShield is economical as well as effective.

Recommended Application Directions:

- 🌿 Mix product thoroughly before use and test on a discreet area before applying.
- 🌿 Apply BioShield using an airless sprayer, a Hudson sprayer or any hand pump sprayer. Although it may mopped, poured or wiped, fine misting is the preferred method.
- 🌿 Mist surface enough to become wet - A thin film is best. Remove excess as it may pool and create a visible film.
- 🌿 Allow to air dry for an hour. Do NOT wipe dry. Coverage can be verified with a black light once dry.
- 🌿 Latex gloves, dust mask and eye protection are recommended during application.
- 🌿 If product comes in contact with skin, wash area with soap and water.
- 🌿 Do NOT swallow. Keep out of reach of children. See MSDS for first aid instructions. MSDS available at www.mrnatural.ca/msds/
